149 structured data items are invalid About this issue: This issue is triggered if structured data items contain fields that do not meet Google's guidelines . Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results. If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings. For more information on the structured data requirements, see schema.org , Google documentation , or our article . How to fix: Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results. We recommend that you use the Rich Results Test tool to review and validate your pages' structured data against their rich snippet requirements.	149 ↑ 149

Warnings

Warnings

Project name: winequipments.com

Warnings	Amount
189 external links are broken About this issue: Broken external links lead users from one website to another and bring them to non-existent webpages. Multiple broken links negatively affect user experience and may worsen your search engine rankings because crawlers may think that your website is poorly maintained or coded. Please note that our crawler may detect a working link as broken. Generally, this happens if the server hosting the website you're referring to blocks our crawler from accessing this website. How to fix: Please follow all links reported as broken. If a target webpage returns an error, remove the link leading to the error page or replace it with another resource. If the links reported as broken do work when accessed with a browser, you should contact the website's owner and inform them about the issue.	189 ↑189
72 issues with unminified JavaScript and CSS files About this issue: Minification is the process of removing unnecessary lines, white space and comments from the source code. Minifying JavaScript and CSS files makes their size smaller, thereby decreasing your page load time, providing a better user experience and improving your search engine rankings. For more information, please see this Google article . How to fix: Minify your JavaScript and CSS files. If your webpage uses CSS and JS files that are hosted on an external site, contact the website owner and ask them to minify their files. If this issue doesn't affect your page load time, simply ignore it.	72 ↓174

Warnings	Amount
1 page has low text-HTML ratio About this issue: Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less. Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results. Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster. How to fix: Split your webpage's text content and code into separate files and compare their size. If the size of your code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.	1 ↓ 1

Detailed Issue: Errors

Detailed Errors

Invalid structured data items

Project name: winequipments.com

Detailed Issue Description

About this issue:

This issue is triggered if structured data items contain fields that do not meet [Google's guidelines](#). Implementing and maintaining your structured data correctly is important if you want to get an edge over your competitors in search results.

If your website markup has errors, crawlers will not be able to properly understand it, and you may run the risk of losing the chance of gaining rich snippets and getting more favorable rankings.

For more information on the structured data requirements, see [schema.org](#), [Google documentation](#), or [our article](#).

How to fix:

Check structured data on your webpages with a validation tool. Please note that different markup testing tools may show different results.

We recommend that you use the [Rich Results Test](#) tool to review and validate your pages' structured data against their rich snippet requirements.

Low text to HTML ratio

Detailed Issue Description

About this issue:

Your text to HTML ratio indicates the amount of actual text you have on your webpage compared to the amount of code. This issue is triggered when your text to HTML is 10% or less.

Search engines have begun focusing on pages that contain more content. That's why a higher text to HTML ratio means your page has a better chance of getting a good position in search results.

Less code increases your page's load speed and also helps your rankings. It also helps search engine robots crawl your website faster.

How to fix:

Split your webpage's text content and code into separate files and compare their size. If the size of your

code file exceeds the size of the text file, review your page's HTML code and consider optimizing its structure and removing embedded scripts and styles.

Unminified JavaScript and CSS files

Detailed Issue Description

About this issue:

Minification is the process of removing unnecessary lines, white space and comments from the source code.

Minifying JavaScript and CSS files makes their size smaller, thereby decreasing your page load time, providing a better user experience and improving your search engine rankings.

For more information, please see [this Google article](#).

How to fix:

Minify your JavaScript and CSS files.

If your webpage uses CSS and JS files that are hosted on an external site, contact the website owner and ask them to minify their files.

If this issue doesn't affect your page load time, simply ignore it.

Duplicate content in h1 and title

Detailed Issue Description

About this issue:

It is a bad idea to duplicate your title tag content in your first-level header. If your page's <title> and <h1> tags match, the latter may appear over-optimized to search engines.

Also, using the same content in titles and headers means a lost opportunity to incorporate other relevant keywords for your page.

For more information, please see [this Google article](#)

How to fix:

Try to create different content for your <title> and <h1> tags.

Resources formatted as page links

Project name: winequipments.com

Detailed Issue Description

About this issue:

We detected that some links to resources are formatted with `<a href>` HTML element. An `<a>` tag with a href attribute is used to link to other webpages and must only contain a page URL. Search engines will crawl your site from page to page by following these HTML page links. When following a page link that contains a resource, for example, an image, the returned page will not contain anything except an image. This may confuse search engines and will indicate that your site has poor architecture.

How to fix:

Review your links. Replace `<a href>` links with tags necessary for specific resources. For example, if you'd like to add an image, use an `<img>` tag with an alt attribute describing the contents of your image.

Only the first 50 rows are shown in reports. To view the full table, export it as a CSV or Excel file from Site Audit.
